PROJECT REPORT

1. Cover Page

Project Title: Online Blood Bank System

Subject: Web Designing using PHP & MySQL & DBMS

Submitted By:
1. Roma choudhary

Class: BCA II Year

College Name: Acropolis Institute of Management Studies and Research

Submission Date: 27-03-2026

2. Introduction

This project is an Online Blood Bank System developed using PHP and MySQL.
It helps users to find blood donors and register as donors.
The system manages donor details and makes the process easy and fast.

3. Objectives

- To create an online blood bank system
- To store donor details in database
- To help users find blood easily
- To make the system user-friendly

4. Technology Used

Frontend: HTML, CSS
Backend: PHP

Database: MySQL
Tool: WAMP

5. System Features

- Donor Registration
- Donor List View
- Admin Login
- Admin Dashboard
- Database Management

6. Database Description

The database is created using MySQL.
It stores donor information such as name, blood group, contact details, etc.
The database file is included in the project as database.sql.

7. Working of Project

Users can register as donors by filling a form.
The data is stored in the database.
Admin can login and view all donor details.
The system helps in managing blood donor records efficiently.

8. Conclusion

This project simplifies the process of finding blood donors.
It is useful for hospitals and patients in emergency situations.
